

JavaScript Keywords

A complete reference to all reserved keywords in JavaScript. These words cannot be used as identifiers (variable names, function names, or labels) in any JavaScript program.

1. Reserved Keywords (ES5 and earlier)

The original set of reserved words in ECMAScript 5.

#	Keyword	#	Keyword	#	Keyword	#	Keyword
1	break	11	do	21	in	31	typeof
2	case	12	else	22	instanceof	32	var
3	catch	13	false	23	new	33	void
4	continue	14	finally	24	null	34	while
5	debugger	15	for	25	return	35	with
6	default	16	function	26	switch		
7	delete	17	if	27	this		
8		18		28	throw		
9		19		29	true		
10		20		30	try		

2. Reserved Keywords (ES6+)

Added in ECMAScript 2015 and later versions.

#	Keyword	Purpose
1	class	Declares a class
2	const	Declares a block-scoped constant
3	export	Exports functions/objects from a module
4	extends	Creates a child class
5	import	Imports functions/objects from a module
6	let	Declares a block-scoped variable
7	super	Refers to the parent class
8	yield	Pauses and resumes a generator function

3. Contextual Keywords (Future Reserved)

These words are not reserved in normal code but are reserved in **strict mode** and reserved for future versions.

#	Keyword	Status
1	implements	Strict/Future
2	interface	Strict/Future
3	package	Strict/Future
4	private	Strict/Future
5	protected	Strict/Future
6	public	Strict/Future
7	static	Strict/Future
8	enum	Future

4. Special Contextual Keywords

Used in specific contexts only.

#	Keyword	Context
1	await	Async functions (ES2017)
2	async	Async functions (ES2017)
3	from	Import/export statements
4	as	Import/export renaming
5	of	for...of loops
6	get	Getters in object literals/classes
7	set	Setters in object literals/classes

5. Literals (Reserved by convention)

#	Literal	Type
1	true	Boolean
2	false	Boolean
3	null	Null value

Total Count

- **ES5 Reserved Keywords:** 35
 - **ES6+ Reserved Keywords:** 8
 - **Future/Strict Reserved:** 8
 - **Contextual Keywords:** 7
 - **Literals:** 3
 - **Grand Total:** 61 keywords
-

Notes

- **Strict Mode:** Enables stricter parsing and error handling. Many "future reserved" words become fully reserved in strict mode.
- **Use:** Always avoid using these keywords as variable or function names to prevent syntax errors.
